SWIPE

UI/UX Designer

Case Study

Project Background

ABOUT PROJECT

Many business owners face challenges in managing their finances and dealing with rigid payment systems, which limits their ability to manage inventory and operations effectively. Through this approach, we aim to provide financial flexibility, reduce business risks, and improve operational efficiency through accessible digital technology.

MY ROLE

UI/UX Designer - Create visual friendly with good experience

SCOPE OF WORK

UI/UX : Research, Visual Design, Interaction Design

The Problems |

STOK & INVENTORY

One of the challenges faced by entrepreneurs is overstocking, a condition where the quantity of goods stored exceeds market demand. This is often caused by ineffective purchasing strategies or the lack of an integrated inventory management system.

JOURNAL TRANSACTION

Many entrepreneurs still record transactions manually or irregularly, which leads to missing or undocumented transactions in the monthly financial reports. As a result, the reports produced are often inaccurate.

DEVICE

There are many digital products that can serve as solutions for business owners, but there are several limiting factors — one of which is the requirement for devices with high specifications to run the applications smoothly, as well as service fees that can be quite expensive.

Benchmark

MOKA POS

moka

MAJOO POS

KASIR MINI POS

KASMINI®

We conducted a competitor analysis on similar products such as Majoo, Moka, and Kasmini.

Our findings from the analysis revealed that their inventory management systems do not fully cover all business needs, the product pricing is relatively expensive, and the data storage solutions are not optimal.

USER PERSONA

Mr Raffly

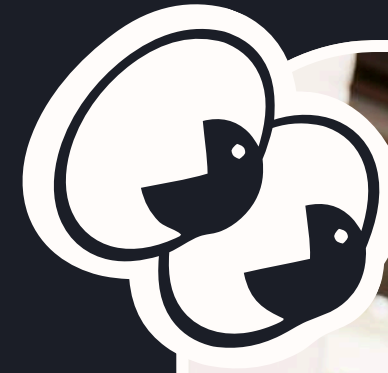

At this stage, I am conducting research with the **Head of the store KALCARE** to understand the current challenges they face in managing the store.

Frustration

- Difficulty in managing stock, especially in cases involving rejected items, expiration dates, and product variants.
- Complicated transaction journals, making it hard to clearly track outcome and income.

Core Needed

- A reliable and well-structured inventory reporting system.
- The ability to clearly monitor store expenses and income.
- Access to detailed customer data reports.

SOLUTION IDEA

After identifying the problem, my team and I formulated ideas and solutions to address it.

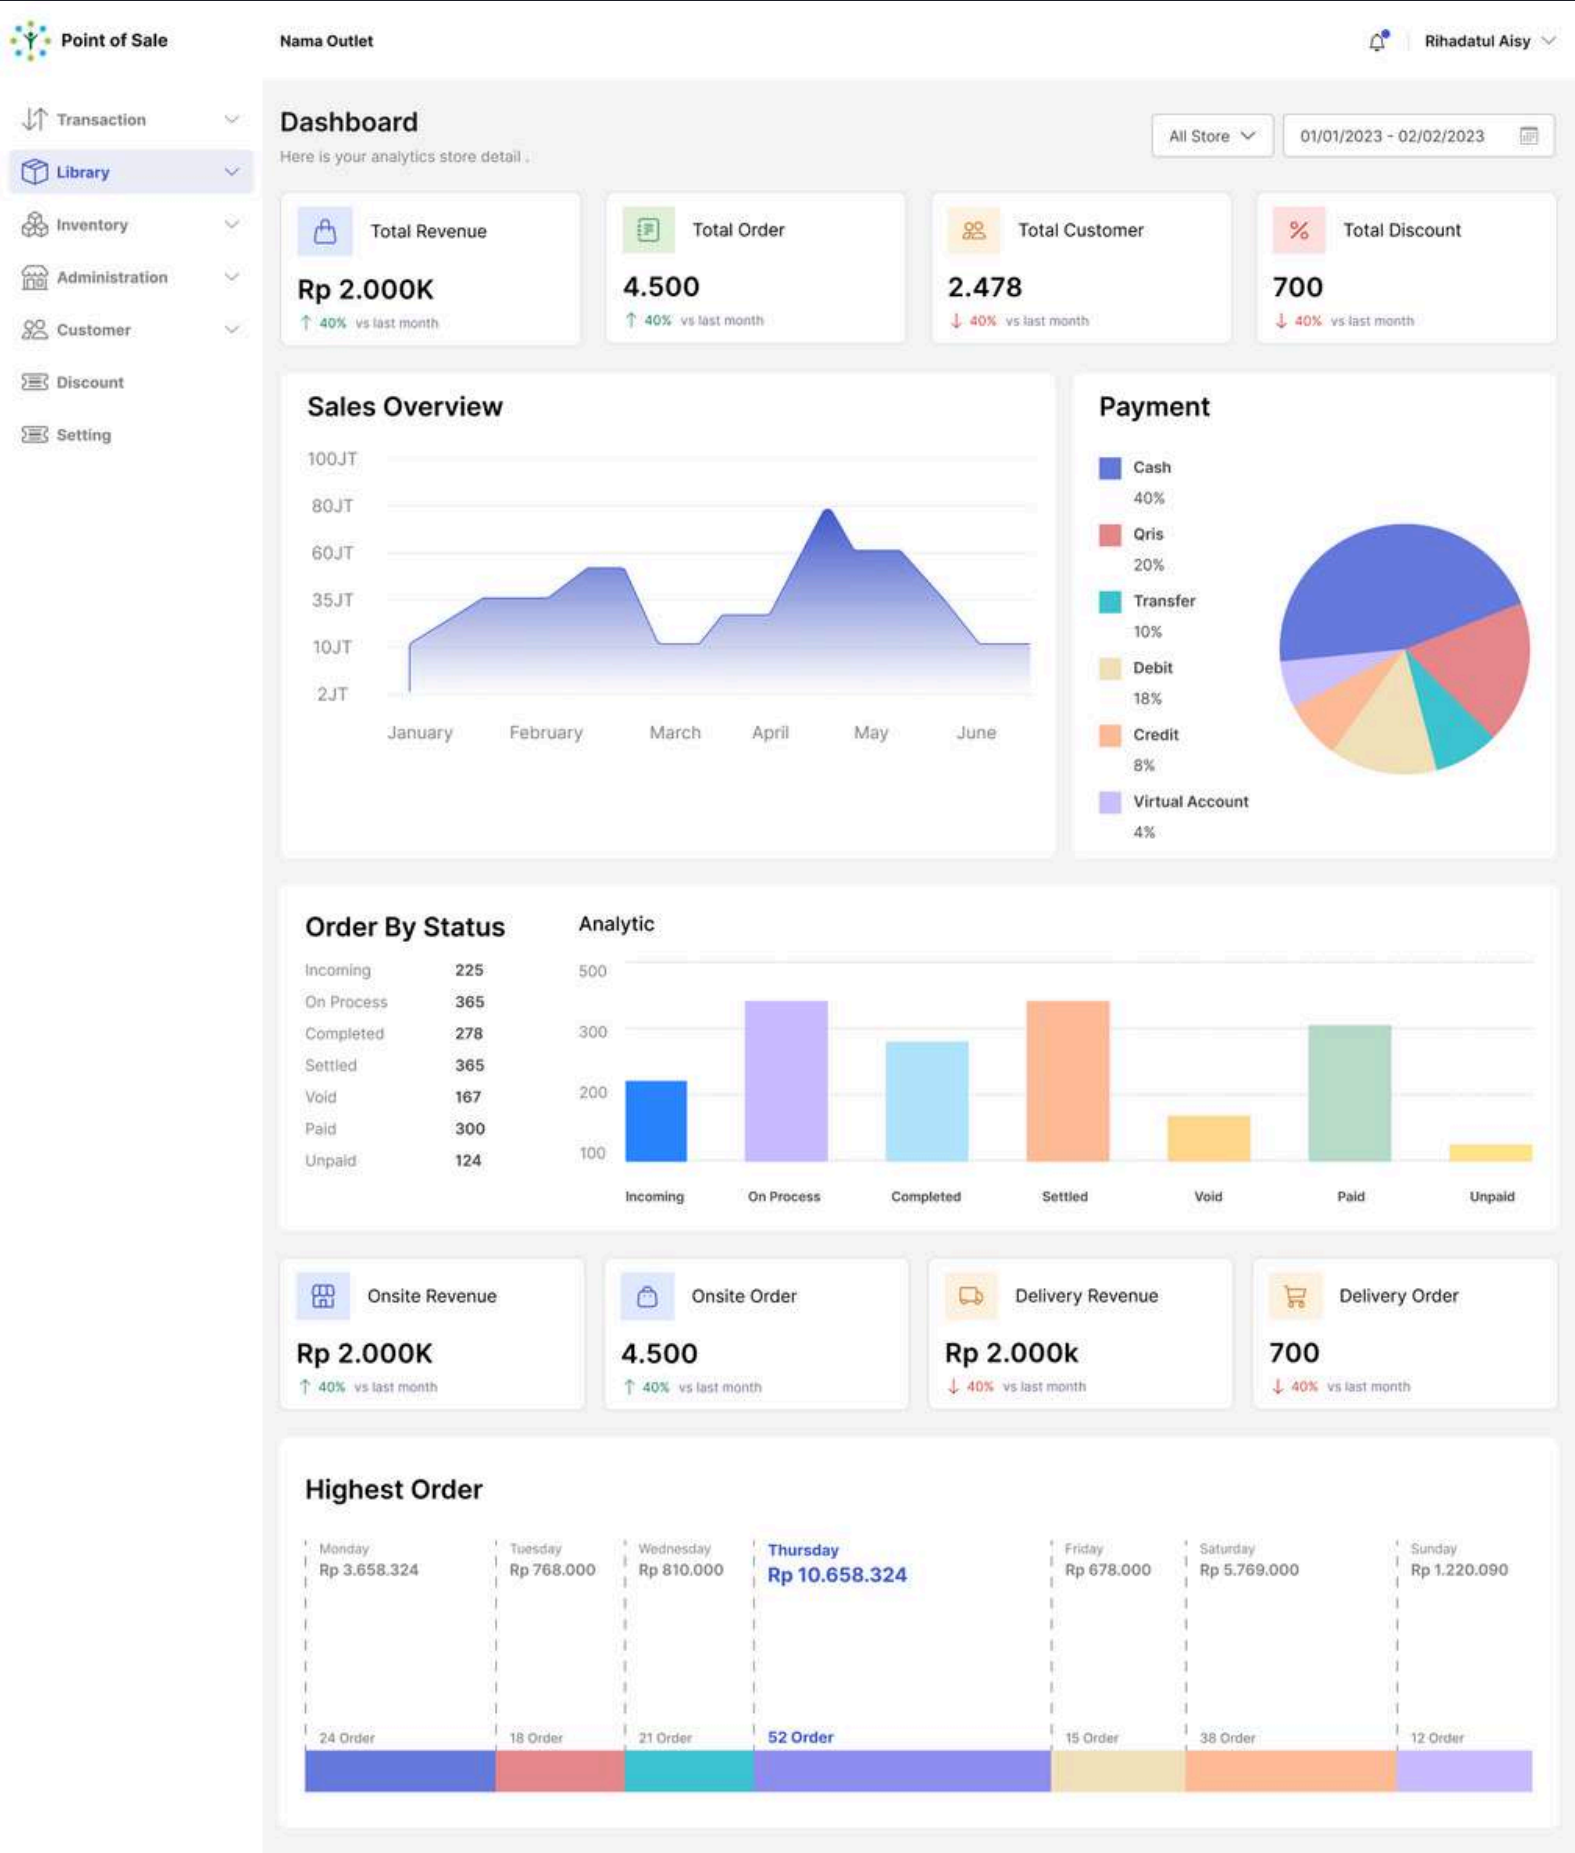

SOLUTION IDEA

Dashboard Report

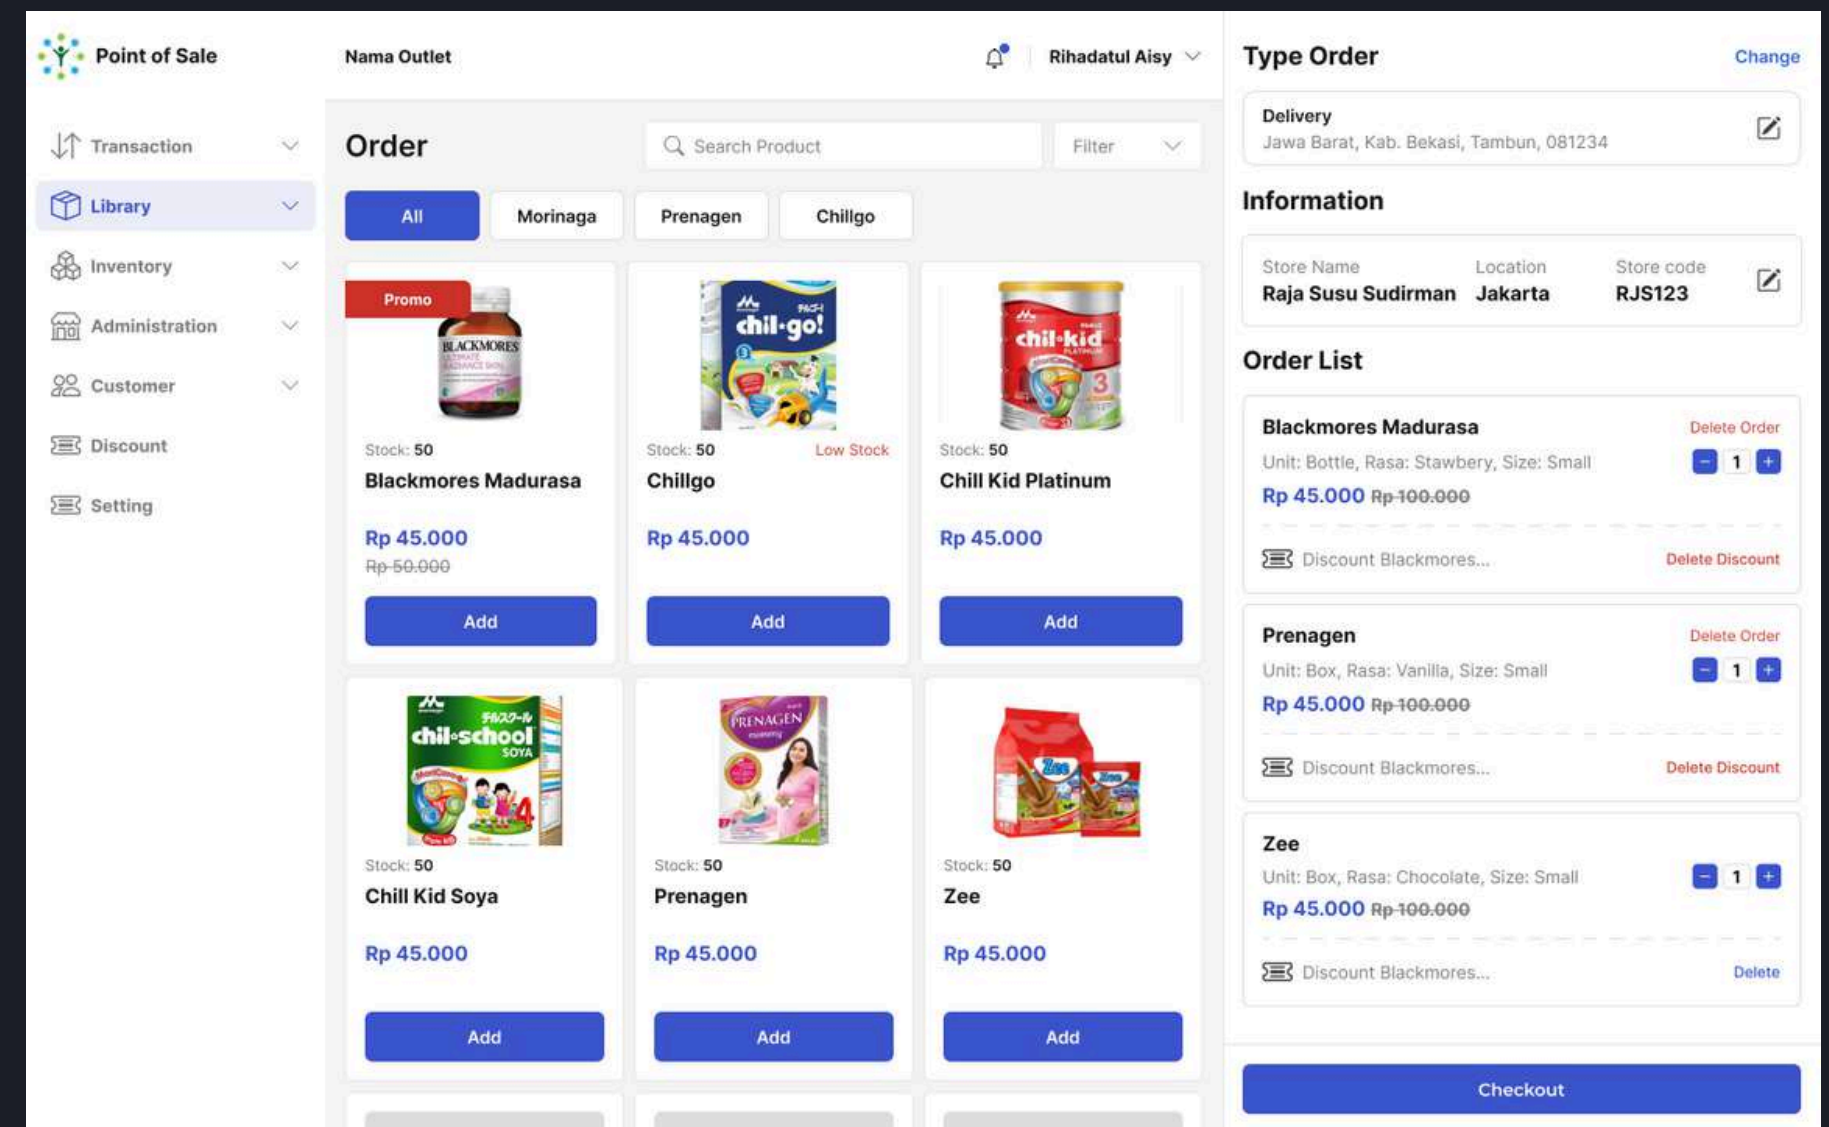

Makes it easier to make summary reports that include various types of data, such as product data, customer data, income, expenses, and many others.

SOLUTION IDEA

Order System

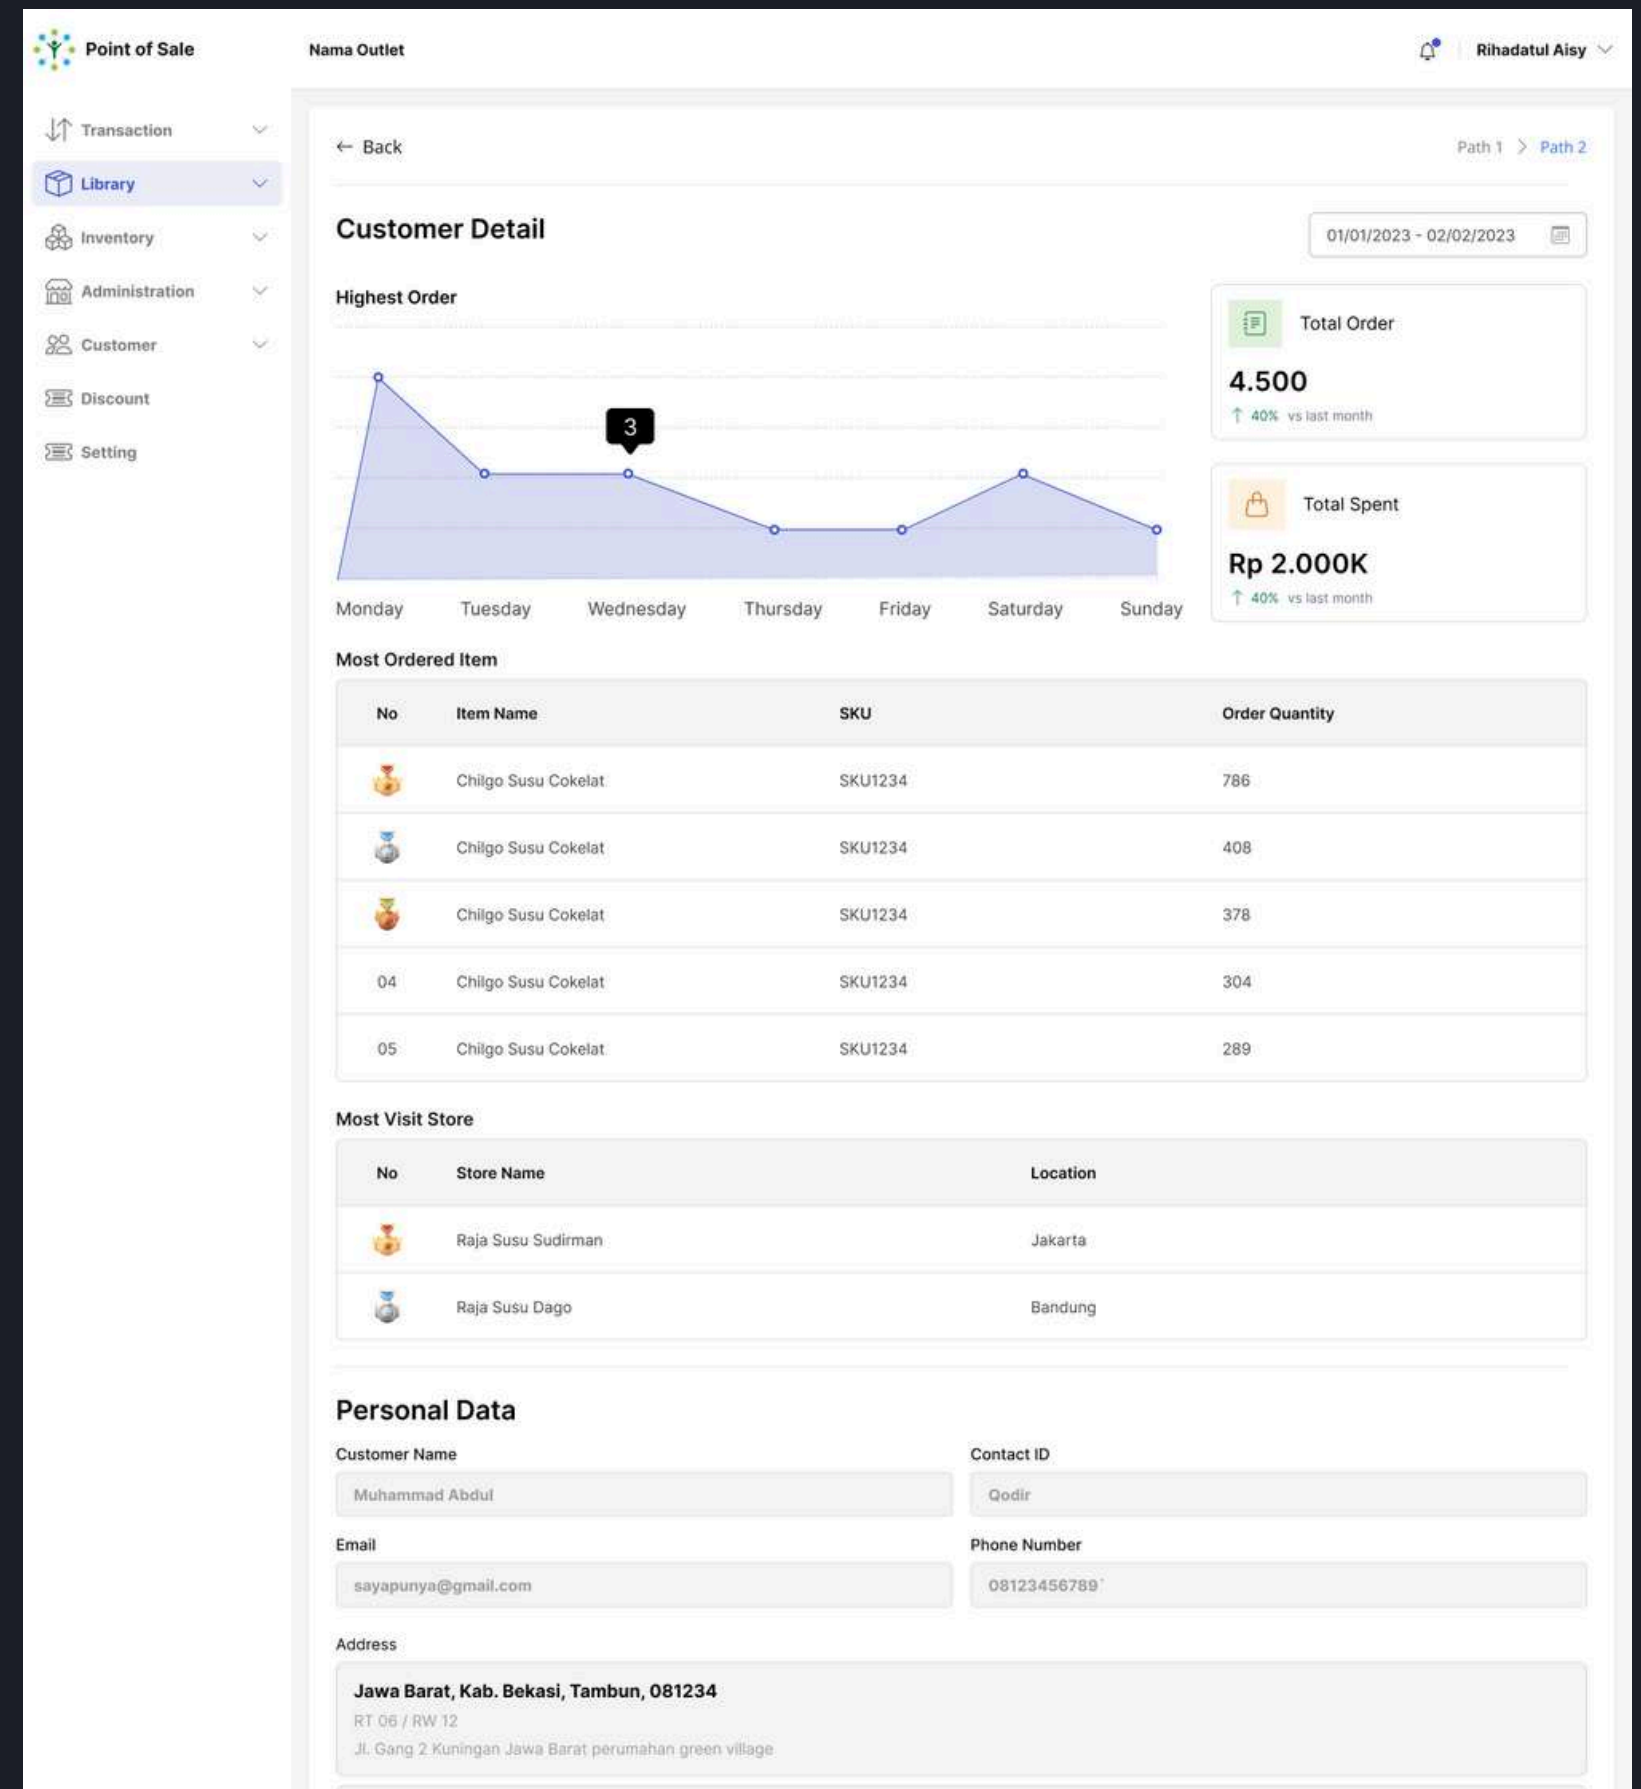

A transaction system with an elegant design and a user-friendly experience, which also makes it easy for users to view product information.

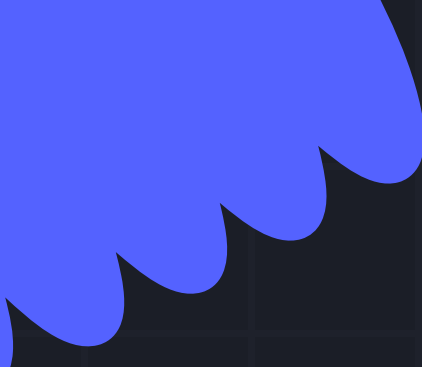

SOLUTION IDEA

Report Customer Data

Makes it easier for users to view and manage customer data, and also allows them to see customer transaction activities.
